Navistools Clash Manager

Navistools ClashManager is a Navisworks Clash Detective extension. It is easy to use but still effective tool for managing project's clash results.

Clashes can be grouped and sorted by many options. If Navisworks model has at least one grid system, then clashes can be also grouped by levels and/or grid intersections.
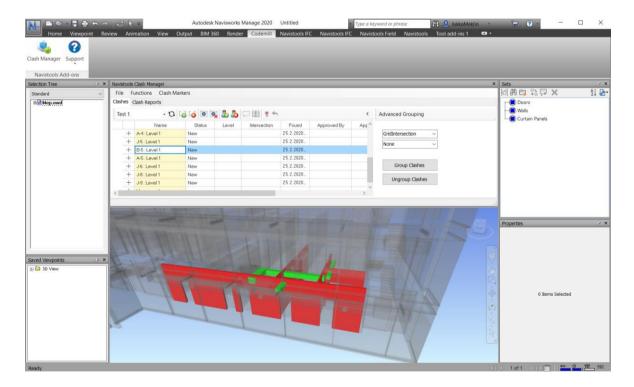

Clashes can be visualized by clash markers, which are selectable objects. User can select them in the screen when grouping clashes manually. They also mark the location of the clashes in top and front projections of the model when user is generating a clash report.

Comments

User can easily add comments to each clash result by using the comments window. Comments are automatically displayed in the clash reports.

Reporter

Report generator is easy to use tool which creates a Pdf clash report of selected clash results. Report consist of detailed view of the clash result and both top and front projections of the model with location of the clash result marked. It also contains all metadata of the clash result including added comments.
