

Navistools IFC Extension

The Navistools IFC Extension is a simple low-cost Autodesk Navisworks add-on which brings real benefits when using IFC files in a Navisworks Project. The Navistools IFC Extension comprises of a simple user interface that enables the user to load an associated IFC file and then view the full IFC hierarchy in an easy to read format.

Objects can be selected from the IFC hierarchy which is then referenced in the Navisworks model and selection tree.

The Navistools IFC extension also contains its own reporting tool for easy generation of custom IFC reports including quantity calculations which can then be output to a variety of file formats including Excel, PDF and csv files.

The Navistools IFC Extension is especially beneficial in BIM and Plant projects where IFC is the current preferred or only format available to import data from specific CAD tools into Autodesk Navisworks.
